### **DETAILED ACTION**

1. Claims 15, 16 and 23 are objected to under 37 CFR 1.75(c) as being improper multiple dependent claims because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 15, 16 and 23 are not further treated on the merits.

### ***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-14, drawn to polynucleotides, vectors, host cells, classified in class 435, subclass 69.1, for example.
  - II. Claims 17-18, drawn to polypeptides, classified in class 530, subclass 350, for example.
  - III. Claims 19-21, drawn to antibodies to a polypeptide, classified in class 530, subclass 387.1, for example.
  - IV. Claim 22, drawn to a method of detecting a sample of DNA, classified in class 536, subclass 24.3, for example.
  - V. Claim 24, drawn to a method of screening molecules, classified in class undetermined, subclass undetermined, for example.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The nucleic acids of Group I,

Art Unit: 1646

polypeptides of Group II and the antibodies of group III are distinct inventions because they are physically and functionally distinct chemical entities, each of which can be made and used without the others. Distinctness is further shown by the lack of a common utility, which is based upon a shared structural feature.

4. Inventions IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different methods that recite structurally and functionally distinct elements, are not required one for the other, achieve different goals, and therefore constitute patentably distinct inventions.

5. Inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the polynucleotides of Group I could be used in an entirely different manner such as for the production of polypeptides rather than in the methods of Group IV.

6. Inventions I and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not required one for the other in that the DNAs of Group I are not required for the method of Group V.

Art Unit: 1646

7. Inventions (II, III) and (IV, V) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not required one for the other in that the polypeptides and antibodies of Groups II and III are not required for the methods of Groups IV and V.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, recognized divergent subject matter and non-coextensive literature searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
